# SUPASPRAY SPARES AND ACCESSORIES

Part no.	Description		Part no.	Description	
Supa 12	Supaspray pump kit 12mm		350-315F	Tap 12mm push-fit inline valve	
Supa 11	Bottom hose and filter assembly		VS/22	Cable ties	
VS501	Teat spray pump mounting kit	011=	FO129	Tubing 12mm x 10m blue	
CF63	Hose clip 35-50mm All Stainless		351-109	Tubing 12mm x 40m blue	
390-302	Vacuum connection grommet		VS/26	Teat spray gun complete 12mm	-
350-319F	Elbow 12mm push-fit x 12mm stem		VS/4	8mm dropper coil	
350-317F	Connector 12mm push-fit x 12mm push-fit	Con .	350-318F	Tee 12mm push-fit x 12mm push-fit	
350-120F	Connector 12mm push-fit x 8mm push-fit		350-130F	Elbow 12mm push-fit x 12mm push-fit	

## SUPASPRAY VACUUM OPERATED PUMP - INSTALLATION

#### 12mm Chemical line MAX approx 10m (if longer is needed, use larger diameter tube). 14mm hole Vacuum line **VACUUM SUPPLY TO PUMP** 1 Drill 14mm hole into **TOP** of vacuum line 2 Insert rubber connector into vacuum line 3 Insert stem elbow into rubber connector 4 Connect elbow to vac line and then to tap / valve on pump. 5 Install pump using wall bracket as shown 6 Fix pump in position using hose clip 1.4 - 1.5m Pickup filter off base 15mm MIN

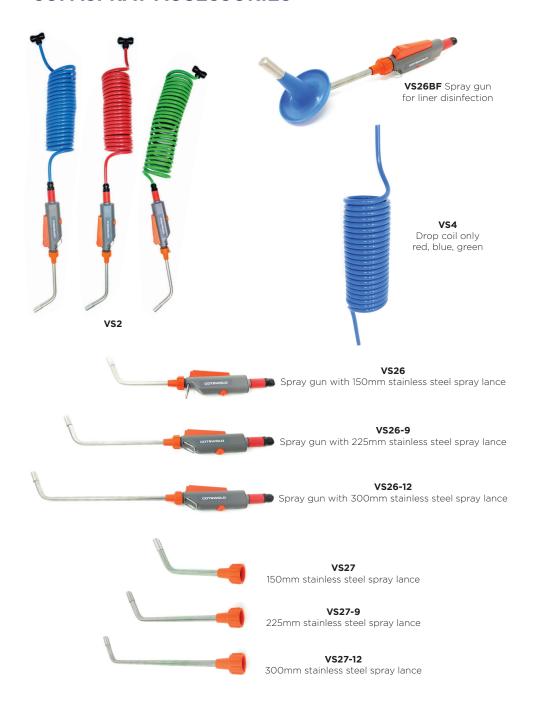

### SUPASPRAY SYSTEM - INSTALLATION

#### SUPASPRAY PUMP REPLACEMENT PARTS

# Cover assembly SUP3 Stainless steel circlip (pack 2) SUP8 Upper Magnetic Valve Assembly SUP22 Full service kit: Chemical seal kit, Upper non return valve, Non-return valve assembly SUP11 Bottom hose & foot filter assembly (not to scale)

#### **SUPASPRAY ACCESSORIES**

### SUPASPRAY FAST FAULT FINDER

DDODLEM

PROBLEM	SOLUTION				
The Pump Stops Moving					
Vacuum Supply may be blocked or restricted	Clear the blockage, ensure vacuum tube is at least 10mm inside diameter (larger for long runs)				
The Magnetic Switch may be dirty or has failed	Clean the magnets or replace the mechanism (Sup 8). Always use a new circlip (Sup 3).				
The Circlip may be broken	Replace Circlip (Sup 3)				
The Vacuum Piston may be sticking	Remove the "L" Tube at the side of the body, and spray lubricant (eg Vacuum Oil) into the vacuum cylinder. Then work the lubricant into the system by manually operating the pump a couple of times.				
Pump is Moving but Not Spraying					
No chemical in the drum	Check the drum and if necessary re-fill it.				
Filters Blocked	Clean the filters on the suck -up tube (top $\&$ bottom) and those in the spray guns.				
Bottom non-return-valve faulty	Unscrew the hose-tail, clean or replace the ball valve.				
Red piston seal may be damaged or worn	Replace the Red Piston Seal (Sup 2)				
Suck-Up Tube may be restricted or blocked	Clear the tube or replace it (Sup 11). The suck -up tube may be kinked inside the drum.				
Upper non-return-valve may be faulty	Unscrew the stainless screw from the end of the shaft – wash out or replace (Sup 2). Don't lose the little ball!				
Spray Guns may be blocked	Check the filters in the spray guns - clean if necessary.				
Guns Spitting and Foaming					
There may be air in the system	Hold the spray guns high and operate them until the air is gone. Check for leaks in the suck -up tube. Check and if necessary replace the red piston -seal (Sup 2)				
The Suck-up tube may be restricted	Clear or replace the Suck-Up tube (Sup 11). Ensure the Suck-Up tube is not kinked or restricted in the chemical drum.				
Red Piston Seal may be damaged or worn	Replace the Red Piston Seal (Sup 2).				
Upper Non-Return-Valve may be faulty	Unscrew stainless piston from the end of the central shaft. Wash out or replace (Sup 2) Don't lose the ball!				
May be a hole in Chemical Lift Tube	Replace lift-tube assembly (Sup 11).				
Chemical in the Vacuum Line					
The Top Chemical Tube Connector may be loose	Tighten the chemical delivery tube connection at the top of the pump.				
The Drum Collar has no drain holes	Unblock the drain holes in the chemical drum collar. If there are no holes in the collar, drill 3 $\times$ 3mm drain holes.				

COLUTION
